

Table Catalog — Level 0 & Level 1 (Xero Data)

Companion to [ACCOUNTANTS_GUIDE_XERO_DATA.md](#) — read that one first for the conventions and caveats. This document just lists every table, in both levels, with a plain-English description of what it holds. Useful as a reference while you're working through an audit and need to find (or ask IT for) a specific piece of data.

One important shortcut: every table below exists, with the same name and the same meaning, in both Level 0 and Level 1. The two levels hold the *same rows* — Level 0 uses Xero's own field names, Level 1 uses standardized/renamed field names — but the tables themselves line up one-to-one. So this catalog only needs to describe each table once. (The one exception is the three **reconciliation tables** at the very end, which only exist in Level 1 — see that section.)

Reference data (one row per "thing," not per transaction)

Table	What it holds	Rows / companies
dim_organisation	The 7 companies themselves — name, country, base currency, fiscal year end date, status. Your starting point for "which company is this."	7 rows (1 per company)
dim_account	The full chart of accounts across all 7 companies — account code, name, type (Asset/Liability/Equity/Revenue/Expense), and Xero's own reporting classification.	874 accounts, all 7 companies
dim_contact	Every customer and supplier, in one combined list. A flag on each row shows whether it's used as a customer, a supplier, or both — see the caveat in the main guide about this not being split into two clean lists yet.	1,798 contacts, all 7 companies
dim_currency	The currencies each company has enabled/uses.	30 rows, all 7 companies
dim_tax_rate	Tax rates/types set up in each company (e.g. GST, VAT, zero-rated).	118 rows, all 7 companies
dim_item	Products, services, and stock items that can be bought or sold — from Xero's "Items" feature (not every company uses this).	2,127 items, 6 of 7 companies
dim_tracking_category	"Departments" — custom reporting splits a company has set up in Xero (e.g. by location, project, or division). Not every company uses this feature.	8 categories, 6 of 7 companies

Table	What it holds	Rows / companies
<code>dim_tracking_option</code>	The specific values within each tracking category above (e.g. if the category is "Location," the options might be "Sydney," "Auckland," etc.).	62 rows, 6 of 7 companies
<code>dim_branding_theme</code>	Invoice/document template designs set up in Xero. Administrative only — not financial.	15 rows, all 7 companies
<code>dim_user</code>	Xero user accounts (who has login access to each company). Administrative only — not financial.	151 rows, all 7 companies

Transactions

Table	What it holds	What one row is	Rows / companies
<code>fact_invoice_line</code>	Every sales invoice and supplier bill.	One line item on one invoice/bill.	29,123 lines, all 7 companies
<code>fact_credit_note_line</code>	Every credit note — both customer credit notes and supplier credit notes.	One line item on one credit note.	661 lines, all 7 companies
<code>fact_payment</code>	Every payment made to a supplier or received from a customer, linked to the invoice/bill it settles.	One payment.	16,396 payments, all 7 companies
<code>fact_bank_transaction_line</code>	Other bank account activity that isn't tied to an invoice or bill — money spent or received and coded directly (e.g. bank fees, one-off receipts).	One line of one bank transaction.	5,724 lines, 6 of 7 companies
<code>fact_manual_journal_line</code>	Manual journal entries — postings made directly by a bookkeeper/accountant rather than generated by a transaction.	One line of one manual journal.	6,985 lines, all 7 companies
<code>fact_purchase_order_line</code>	Purchase orders — before they become a bill.	One line item on one purchase order.	2,139 lines, 5 of 7 companies

Table	What it holds	What one row is	Rows / companies
<code>fact_quote_line</code>	Quotes — before they become a sale.	One line item on one quote.	3,461 lines, 3 of 7 companies
<code>fact_bank_transfer</code>	Transfers of money between a company's own bank accounts (not a sale or purchase).	One transfer.	113 transfers, 3 of 7 companies
<code>fact_overpayment_line</code>	Overpayments — money received or paid that's more than what was actually owed, sitting as a credit until it's applied to a future invoice/bill.	One line item on one overpayment.	91 lines, 4 of 7 companies

The general ledger

Table	What it holds	What one row is	Rows / companies
<code>fact_general_ledger</code>	The full general ledger — every posting Xero has made, from every transaction type above, all in one place, going back to 2017 for the oldest company. This is the master record everything else should tie back to. See the main guide for the one known limitation (opening/conversion balances on balance sheet accounts aren't included).	One ledger posting (one debit or credit line).	226,788 postings, all 7 companies

Xero's own reports (saved copies, for reference)

Table	What it holds	Rows / companies
<code>fact_report_row</code>	Saved copies of Xero's own built-in reports — Trial Balance, Balance Sheet, Profit & Loss, Executive Summary, Bank Summary, Budget Summary — captured at the time each was pulled from Xero. This is Xero's own report <i>output</i> , not something we calculated — useful as an independent reference point since it comes straight from Xero.	32,200 rows total, all 7 companies (mostly Trial Balance and Balance Sheet snapshots)

Reconciliation checks — **Level 1 only**

These three tables don't exist in Level 0. They're not source data — they're the output of comparisons we've already run between our own numbers and Xero's, specifically to help with exactly this kind of audit review. If you're checking whether the numbers "make sense," these are the most direct place to look.

Table	What it compares	What we found
recon_trial_balance	Our general ledger totals vs. Xero's own Trial Balance report, account by account.	Income statement accounts: 98% match exactly. Balance sheet accounts: only ~15% match — expected, see the conversion-balance note in the main guide. 429 rows (one per company + account combination).
recon_profit_and_loss	Our general ledger totals vs. Xero's own Profit & Loss report for the current period.	94% match exactly; the small remainder is immaterial amounts Xero's own report doesn't even display. 85 rows.
recon_document_facts	Invoice/bill/payment/credit-note/etc. totals vs. the general ledger directly, account by account, across all history.	Matches well for most companies and transaction types. Two companies (Aqua Pharma Inc, Aquatiq Ltd) show a real, unresolved gap — see the main guide for detail. 1,453 rows.

Each row in these three tables shows: the company, the account, our number, Xero's (or the ledger's) number, and the difference — so you can see exactly where and by how much something doesn't tie, rather than just a pass/fail.

If you need one of these tables pulled for a specific company or time period, just ask — table and column names above are exactly what IT will need to find it.
